1. SLH API

1.SLH API

--on Matt san's API Document--

AS questions

1) Which API could be applied when we deal with Minsu information and products?
Your API deals mainly with tours, but I believe it could deal with Minsu in any way. I would be happy to hear your comment on this.

Actually I am working on a draft about Minsu , including Minsu's basic information, available days and quantity allowance and daily price.

2) It seems to me better if we could know more of the terminologies on your API such as follows.

a. 1.1 Banner Slider API—Is this for adverticement?

- Not exactly, it is for a web site frontend page, such as product list panel, or slide show.

b. 1.2 Tree Menu API—Some explanation needed

1.2.1 Full Menu Tree—Some explanation needed

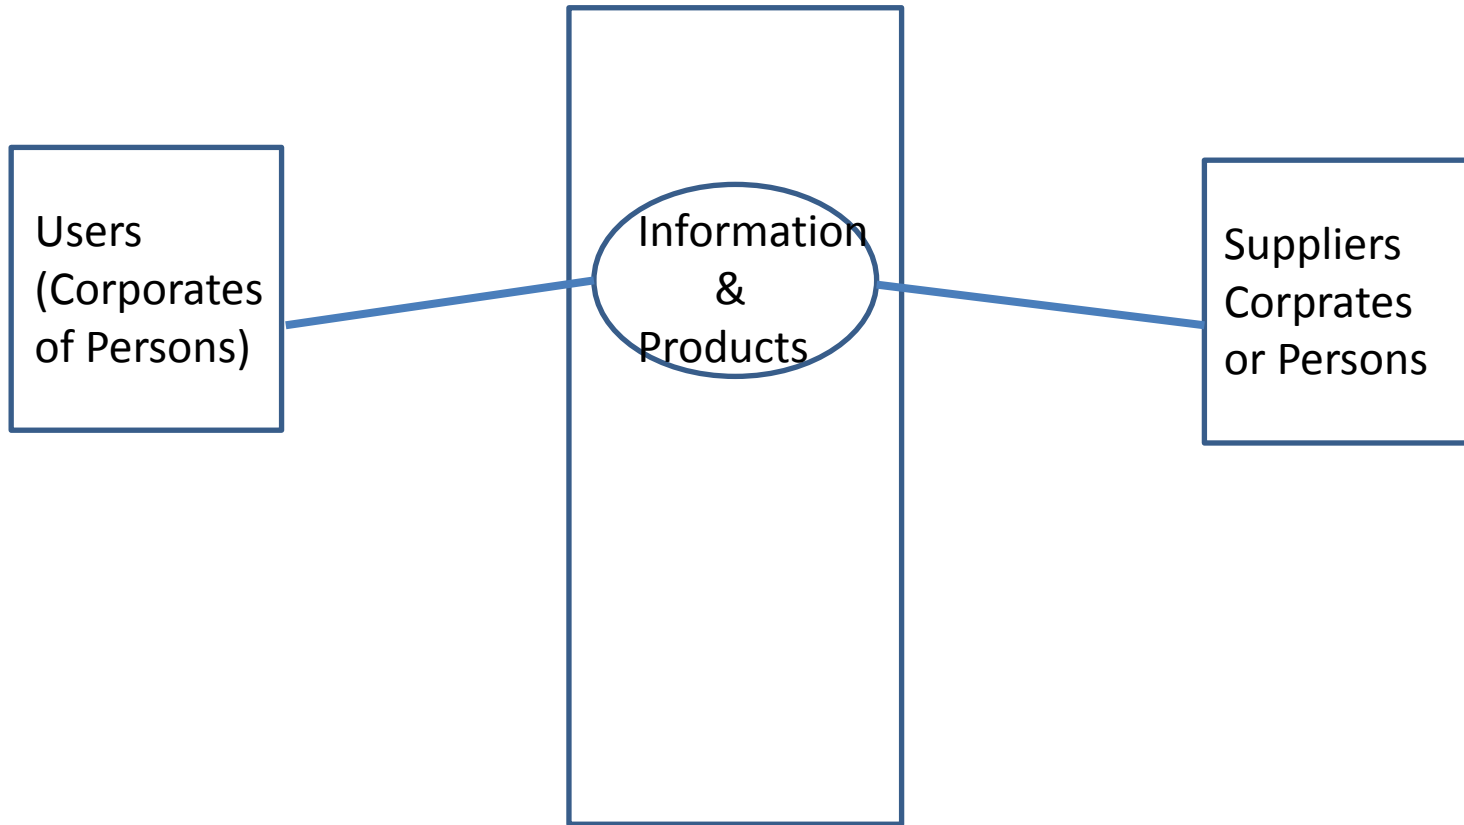

1.2.2 Single Layer Tree—Some explanation needed

- It will be easily to demo it by real web site example.
- This kind of menu is composed of a tree data structure, it is usually used to maintain a menu, a category, something like this.

1-2. SLH API

- c. 1.3 Themed Itinerary API—Some explanation needed
 - This API is deprecated, can be replaced by tree structure API.
- d. 2.1 Simple API—What are these Simple API? or Why do you call Simple API?
- e. 2.2 Raw Data API—Are these data for the use of wholesalers?
 - The difference between *simple* and *raw* is just their fields returned by server. Simple has less fields, Raw has full fields of an object. I am planing to combine both of them.
- f. 2.3 Transactional API—Are these used to trade between business partners?
 - Yes, totally right.

1-3. Use case diagram of SLH & Minsu

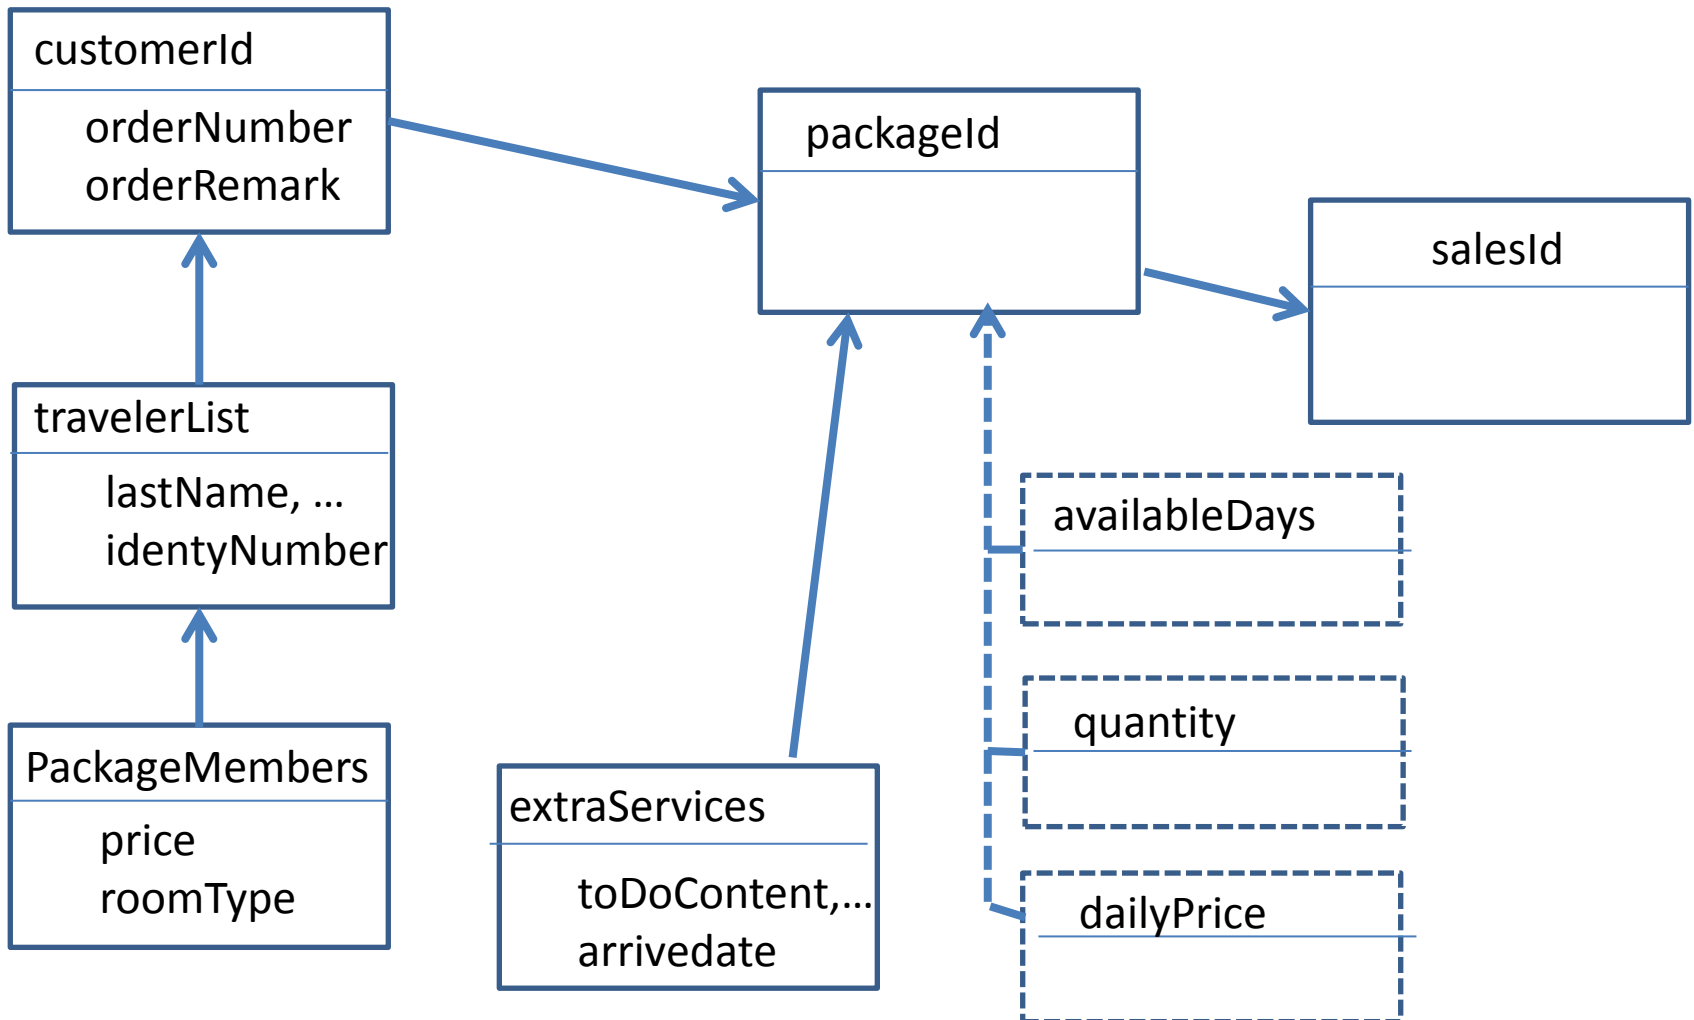

Note:

There are a large variety of suppliers

Any corporates or persons could be suppliers.

1-4. Riversoft API could be applied to Minsu or SLH

Class Diagram(taken from Place Tour Order)

2. Green Paper Project Proposal(Draft)

Project Proposal for Green Paper on Experience Programs (Draft)

Submitted Date 5 September, 2017

1. Project Purpose

The project is to start preliminary works to research global needs and to be well prepared for facilitating or standardizing electronic business processes of Experience Programs (EP). EP, which might be understood at this stage, could be major subjects of emerging tourism, which visitors might enjoy in a local area or areas of a country or countries. EP could be composed of localized events or activities and might be different from area to area or country to country, which might function to vitalize or revitalize the area or areas.

EP could be widely produced and distributed worldwide in the near future by any local people. Their business players might be so diversified and their information could be so wide ranged that it might be better to create the Green Paper first to deal with the diversity with global experts having interest in EP.

There should be some necessity to consider historical, cultural, or habitual information related to the areas concerned to let visitors understand EP better, and the working results of Small scaled Lodging House Information Process and Destination Travel Information Process Projects might be considered to take them integrated as best as possible in the creation of the Green Paper.

Some Asian Pacific countries, like India and Japan, have been studying EP based on actually operated EP or their trials in their local areas, and they are sure that in any country EP might expand greatly in quantity and quality into the future. EP could also play very important role in local area development of a country, which should well follow the concepts set in 17 UN/SDG (Sustainable Development Goals).

2. Project Scope

In the project the following items will be well surveyed and discussed to create the Green Paper on EP.

- 1) Getting information on EP from as many local areas or countries as

3. Regional Data Store

Consist of regional data

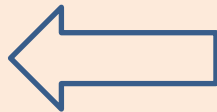

3rd Tier

General Information & Data
Life, Geography, Culture, History

2nd Tier

Product related Information & Data

Extend

DTI

Extend

Basic Tier

Regional Products
SLH, Experience Programs, etc.

4. Experience Program in Japan and Expected Future by Mr. K. Hotta

Hotta san's Presentation

Initial contribution:

1) India Document provided by Sachin san.

2) Japanese Document with AFACT TT&L WG

Results

5. Group Tour Matters

Mr. T. Tai will present on Group Tours.

6. DTI Project and its Restart
